

Native America Domestic Violence Awareness Month October 2013

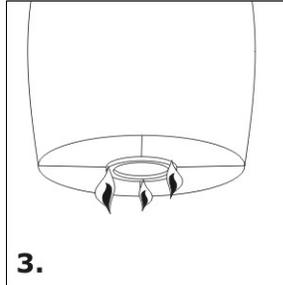

Lighting and Safety Recommendations:

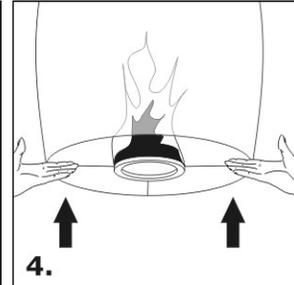

1. Carefully open out Sky Lantern and expand to its full size.

2. Remove the fuel cell from its packaging and attach to the brace under the Sky Lantern.

3. Open the Sky Lantern out and hold it upright. Light the Fuel Cell in several places to ensure an even burn. Be careful not to let the flame touch the paper.

4. The Fuel Cell should be left to burn until the Sky Lantern has filled sufficiently with hot air. When it is ready to fly, it will want to pull out of your hands. (30-40 seconds)

Hint: Practice this before the event. Form a "**Lighting Safety Team**" that helps participants at the event with lighting. Maybe have them as the official fire carriers that light the Lanterns.

Safety Recommendations:

Sky Lanterns are not suitable for use by persons under 18 years of age without close supervision.

Do not use if under the influence of alcohol or drugs.

Do not launch a torn or damaged Sky Lantern.

Always release Sky Lanterns with two hands.

Do have a first aid kit or local volunteer emergency services available.

In order to protect yourself and third parties, when using the Sky Lanterns you must follow these safety instructions and the operating instructions. Please exercise diligence by using common sense when handling flammable components.

Only launch Lanterns if the wind is below 7 miles per hour. If there is light wind, determine its direction. Ensure that when launched, the Sky Lanterns do not represent a danger by flying into or over dry forests, buildings, roads, airports or electricity pylons. Have sand or buckets of water prepared for unexpected incidents.

If you intend to organize a mass Sky Lantern launch we recommended that you inform the relevant local authorities.

Always avoid possible fire hazards. Do not use during prolonged periods of dry weather. Please dispose of the packaging materials carefully and responsibly.
